

Brief description of web app

The basic idea of this app revolves around the fact that many tabletop games (the most common of which being Dungeons & Dragons) require lots of dice rolls throughout a given play session. This app should provide an immensely useful service to anyone playing a tabletop game who wants to be efficient with rolling dice. Instead of physically rolling a few dice at a time and manually adding them up, you can just enter how many dice you want to roll and do it instantly in this website. Additionally, users will be able to save rolls that they want to quickly access again at a later time, which would be extremely useful if an ability of some sort requires the player to roll a specific set of dice often.
